PROFFESIONAL SUMMARY

DevOps Engineer with 2+ years of experience automating infrastructure, CI/CD pipelines, and deployment workflows on AWS and Kubernetes. Strong background in GitOps, container orchestration, and building reliable pipelines that ship software faster with less toil.

SKILLS

- CI/CD: GitHub Actions, Jenkins, ArgoCD, ECR, automated release pipelines, Helm validation workflows
- Containers & Kubernetes: Docker, EKS, Helm, ArgoCD, Karpenter, Kustomize
- IaC: Terraform, AWS CloudFormation
- AWS: EKS, EC2, VPC, IAM, S3, Route53, ACM, ECR, ASG, Lambda
- Monitoring: Prometheus, Grafana, AlertManager, Elastic Stack, Kibana
- Languages: Python, Bash
- Databases: ClickHouse, MongoDB, PostgreSQL

EXPERIENCE

FRESHWORKS, CHENNAI

2023- PRESENT

DevOps Engineer

- CI/CD & Release Automation
 - Built GitHub Actions pipelines for Helm schema validation, automated ECR image synchronization to private registries, release tagging, and ArgoCD deployment triggers
 - Operated Jenkins CI for MongoDB operator builds and integration test execution
 - Achieved zero-touch deployment for ClickHouse tenants: Python-generated manifests → ArgoCD sync → fully automated provisioning
- GitOps & Deployment
 - Deployed and operated ArgoCD as the single deployment mechanism across all Kubernetes environments
 - Migrated deployment framework from Kustomize to Helm; introduced values-based configuration for multi-environment consistency
 - Built remote migration tooling: ClickHouse Remote Functions for customer data onboarding, Route53 cutover automation
- Infrastructure Automation
 - Terraform-automated full AWS stack: EKS, VPC, IAM, Route53, ACM, S3, ASG, Security Groups
 - Karpenter for dynamic node lifecycle management; Gatekeeper for policy-as-code enforcement
 - Python-based tenant provisioning: dynamic manifest generation for ClickHouse, ZooKeeper, Envoy

- **Observability & Reliability**
 - Deployed Prometheus + Grafana + AlertManager with custom PromQL alerting rules; Slack integration for on-call notifications
 - Elastic Stack + Kibana for centralized log aggregation and debugging
 - Designed DR framework: automated ClickHouse backups, S3 cross-region replication, automated restore workflows
 - **Performance & Cost**
 - Benchmarked ClickHouse versions before production upgrades; established performance baselines
 - Built AWS Cost Explorer + Lambda pipeline for per-tenant infrastructure cost reporting
 - Implemented tiered EBS → S3 storage with ClickHouse TTL policies; reduced storage costs
-

PROJECTS

- SOPCTL Incident Assistant — Slack + Temporal workflow automation for incident response
- ClickHouse MCP Server — AI operational tooling (FastMCP) for query analysis and alerting
- MongoDB Operator Migration — PSMDB → CSMDB with custom operator development; 16 TB data migration

EDUCATION

Bachelor of Science (BS) Degree in Data Science and Applications

Indian Institute of technology, Madras 2023 - 2027

COURSEWORK

CKAD: Certified Kubernetes Application Developer

LANGUAGES

Tamil - Native

English - Fluent
